

Cystic Fibrosis Mutation Analysis

Flexible Solutions for Cystic Fibrosis Mutation Analysis

Cystic Fibrosis is one of the most common life-threatening genetic conditions, with as many as 1 in 25 people serving as a carrier for the autosomal recessive condition^{1,2}. Cystic fibrosis (CF) genotyping assays can be expensive and restrict assay content to a limited number of targets that are only applicable to a single population.

The MassARRAY® System with iPLEX® Pro Cystic Fibrosis Panel provides a fast and cost-effective way to detect 74 of the most common disease-causing mutations of the CFTR gene.

- Includes the 23 CFTR mutations recommended by ACMG and ACOG. It also includes 51 variants with known CFTR relevance and allele frequency >0.1% (Table 1).
- Enables greater workflow efficiency with minimal manual processing - DNA to data in as little as 8 hours.
- Delivers simplified reporting and clear results with automated software provided at no additional cost.

For Research Use Only.
Not for use in diagnostic procedures.

iPLEX Pro Cystic Fibrosis Panel Targets

74 Total Targets

23 ACMG/ACOG-recommended variants

51 of the other most common variants (allele frequency >0.1%) with known CFTR relevance

ORDERING INFORMATION

Catalog No.	Item	# Samples	Chip Format
13162	Complete CFTR Panel Set	320	96
13162F	Complete CFTR Panel Set CPM	320	96 CPM
13163	Complete CFTR Panel Set	1280	384
13163D	Complete CFTR Panel Set CPM	1280	384 CPM

These panel sets contain assay specific primers and all the required reagents to process DNA samples on the MassARRAY system.

CUSTOM PANEL DESIGN

Don't see what you need? Agena Bioscience offers two options to create your CFTR custom panel. You can independently design content using our online assay design software, or partner with our scientists for assay development and verification services.
