

Melanoma Variant Profiling

Uncover More in Melanoma Testing

Technology limitations often force a compromise between the number of targets that can be simultaneously surveyed and the ability to detect variants that are present in low frequencies.¹ The MassARRAY technology enables both in a rapid and cost-effective manner.²

AGENA'S SOLUTION

➤ **UltraSEEK™ Melanoma Panel**

Enables the study of disease progression and resistance from CTCs and ctDNA across 61 clinically relevant variants, detected at as low as 0.1% minor allele frequency (MAF).

➤ **iPLEX® HS Melanoma Panel**

Detects 97 clinically relevant variants at as low as 1% MAF from poor quality and degraded samples such as FFPE tissue, smears, fine needle aspirates and core needle biopsies.
